Tabula

For Horticulture

"Tabula is a great benefit for night spraying as it helps locate the correct block, exact starting point, confirms where you are spraying and what still needs to be done, even in pitch dark conditions. I would strongly recommend Tabula as it makes our operation more efficient and is simple to use."

JEFF HARPER
Operator, Moora Citrus

One platform. Many uses.

Supporting a wide range of orchard activities:

SPRAYING

FERT SPRAYING

LEVELING

PEST & DISEASE
MANAGEMENT

ROLLING

CULTIVATION

MOWING

POST REPAIR

TRIMMING

Across a wide range of crop types:

TREE NUTS

STONE FRUIT

SUMMER FRUIT

VITICULTURE

AVOCADO

KIWIFRUIT

TABLE GRAPES

TROPICAL FRUIT

CITRUS

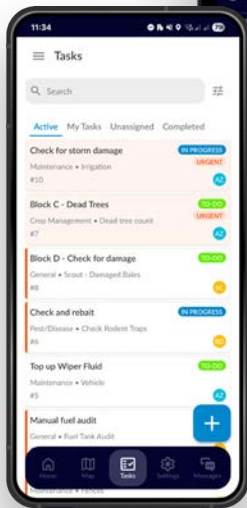

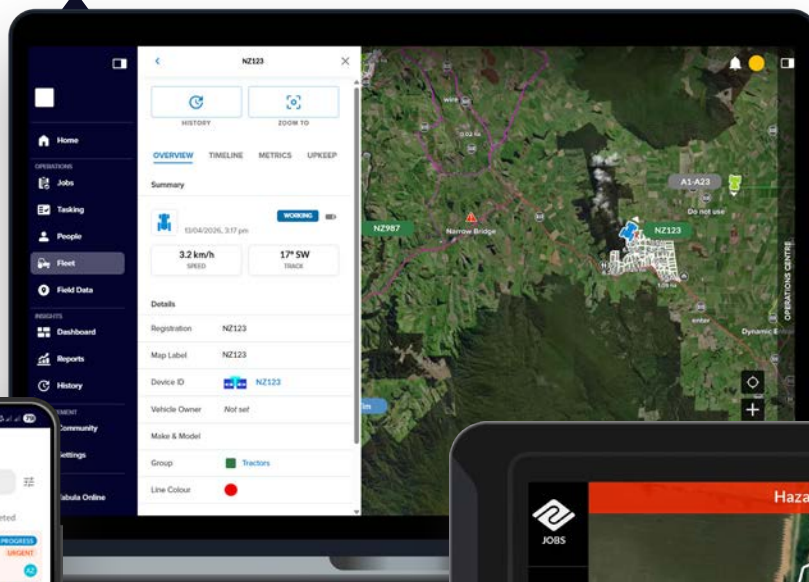

Beyond GPS guidance. A better way to run your operation.

Everything connected as one

Tabula brings your entire operation together in one connected system — from the operational center, to the cab and across the orchard. Plan jobs clearly, guide operators in real time and capture all work as it happens, whether in the vehicle or on foot.

With everything connected, crews stay aligned, work keeps moving and every job is accurately recorded. Less chasing details, less admin and full confidence that nothing has been missed.

 TABULA LIVE

 FIELD SUPPORT APP

 TABULA GROUNDVISION TABLET (GVT)

You can't be everywhere. But Tabula can.

Bring every part of your operation together in one connected system.
See how work flows from planning through to completion.

1. Plan ahead

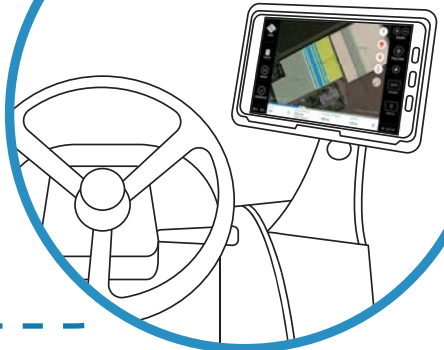

Start the day with everyone on the same page.

Work is organized, priorities are clear and the right information is available before crews head out.

2. Run the day

Keep work moving when conditions change.

Updates flow quickly, teams stay connected and decisions can be made with confidence.

3. Track progress

Stay informed without chasing answers.

Know what's happening across the operation as work unfolds, wherever your crews are working.

4. Record work

Finish the day with nothing left to reconstruct.

Work completed, time spent and key activities are already captured and ready when needed.

Built for the way you work.

A complete set of tools to support your operation.

Job Management & Mapping		
Job Management & Scheduling	Plan, assign and track every job across your operation.	p6
Proof of Application (POA)	Capture accurate data including location, date, vehicle and application details for customer reporting, audits and compliance requirements.	
Property & Infrastructure Mapping	Create maps of a customer's properties, detailing infrastructure and facilities.	
Tracking & Navigation		
Live Tracking	View current and historical data for vehicles with a GVT or a tracker.	p7
Tabula Navigate	Guide operators from job to job with navigation that re-routes around hazards and restrictions to keep work moving.	p8
Operations & Coordination		
Whiteboard	Share job and site information visually in one place across your Tabula system.	p9
Ops Planning	Plan work visually with measurement, drawing and calculation tools that help prepare accurate jobs before work begins.	
Task Management	Manage and track tasks beyond the vehicle via Tabula Live or the Field Support App.	
Tabula Messaging	Personalized instant messaging based on operator login, across all Tabula devices.	p10
Community & Neighbor Notifications	Notify neighbors before activity and record property-related feedback in one place for audits and reporting.	p11
Timesheets	Keep timesheets accurate and easy to manage.	p12
Health & Safety		
Hazard Management	Share hazards and cautions for properties and routes across all Tabula devices, with pop-up alerts on GVT.	p13
SOS	Send instant SOS alerts from the cab or Field Support App with automatic location sharing, so you can respond quickly and coordinate incidents.	
Fleet Management		
Field Forms	Complete checks in the field using tailored checklists on the Field Support App.	p14
Fleet Management Notifications	Set usage-based maintenance reminders for individual assets.	
Field Data Capture		
Observations	Log observations, with GPS location, for future reference or follow-up task creation.	
Field Records	Manage inventory and field data by location. Update quantities as they change, so you always know what's where without manual logbooks.	p15

Plan the day right. Get the work lined up.

Set up jobs and
schedules in one place

Plan, schedule and assign work in one place, so your team starts the day ready to go. With everything set up from the outset, you reduce confusion, avoid delays and keep work moving. As plans change, adjust quickly and keep schedules on track.

*Create and schedule
jobs in one place*

*View workloads across
teams at a glance*

TABULA IN ACTION

Four spray jobs, two blocks to mow, an irrigation line to fix and weather on the way. With Tabula, everyone assigned to a job receives the information they need to get started or step in and help finish the work. Location, equipment, settings and spray mix are delivered straight to the GVT or Field Support App.

Know what's happening. As it happens.

See jobs, vehicles and crews in real time

Stay on top of every job as the day unfolds. With Tabula, you can see vehicles, crews and equipment in real time, so you can respond quickly, reduce delays and keep everything running smoothly.

Monitor speed, movement and time on site

See where work has been completed at a glance

 TABULA LIVE

View historical activity for review and investigation

See all vehicles and crews in real time

Track vehicles and equipment via tablets or trackers

 G70 TRACKER

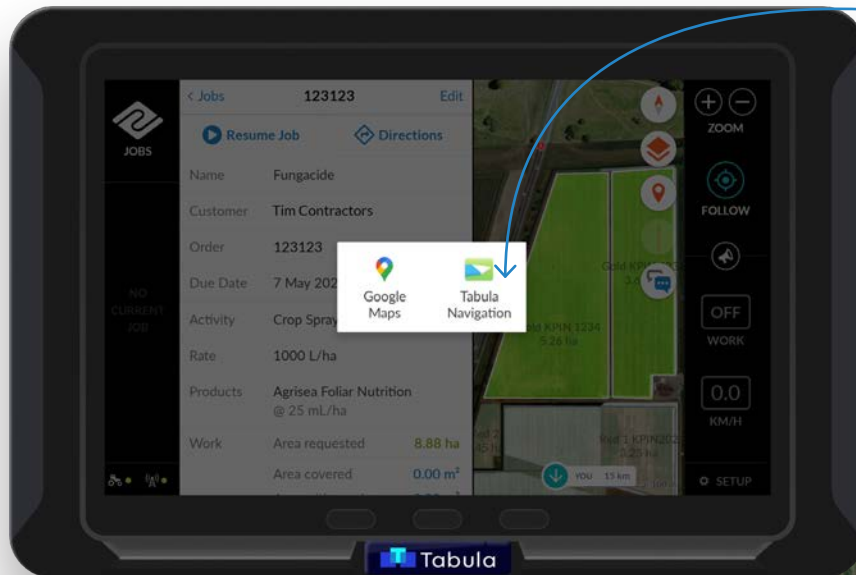

TABULA IN ACTION

Keep an eye on new spray operators, in real time or by reviewing their tracking line, to make sure they're driving at the right speed for the job and weather conditions. With Tabula, you can intervene immediately to make sure the job is done right the first time.

Get there safely. Avoid the hold-ups.

Navigate safely with
real-time hazard alerts

Guide operators between orchards with navigation built for real conditions. Tabula Navigate checks routes against live hazard data, re-routing around risks and restrictions to keep work moving. Set how hazards influence routes and define safe distances to match your operation.

Select Tabula Navigate
to follow turn-by-turn
navigation to each job

Check routes against
live hazard data

Automatically re-route
around hazards and
restrictions

Set how hazards
influence routes

TABULA IN ACTION

Road works, temporary weight restrictions on bridges, closures due to landslides or flooding. With Tabula, reduce the risk of backtracking after taking the wrong road at the wrong time.

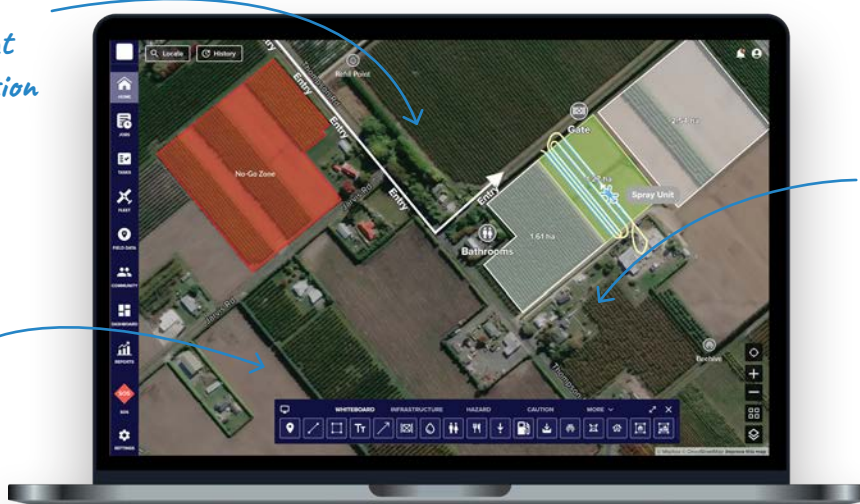

Keep everyone aligned. One place for the details.

Share key job and site information

Keep your team aligned with the information they need, when they need it. With Whiteboard, key job details, site notes and updates are shared in one place — so everyone sees the same information and work runs smoothly.

Use drawings and markers to highlight important information

Update or remove details as work progresses

Add gate codes, refueling points and site notes

See all updates on a single shared map layer

 TABULA LIVE

Access Whiteboard from Tabula Live, GVT and the Field Support App

TABULA IN ACTION

TABULA GVT 

 FIELD SUPPORT APP

It takes a while for staff to understand how to get around the orchard, remember access codes and figure out the closest water sources. With Tabula, give each new staff member the knowledge of a seasoned operator with clear visual instructions and marking facilities on the GVT or Field Support App.

Message your team. Without leaving Tabula.

Keep conversations
connected to the work

Link messages to jobs, tasks, vehicles and people, so your team can see the full picture and act quickly — without chasing details across multiple apps. Share images, PDFs and updates, keep communication clear with reactions, with every message linked to the logged-in operator.

*Share images, PDFs and
updates with full visibility*

*Manage conversations
alongside live jobs and activity*

*Message 1:1 or
in groups from
anywhere in the field*

 **TABULA LIVE**

*Reference jobs, tasks, fleet and people
directly within the message*

TABULA IN ACTION

TABULA GVT

 **FIELD SUPPORT APP**

*Message operators
directly — not just devices*

*Send updates
and attachments
in real time*

Remind everyone about the new PPE requirements; let the crew supervisor know contractor delays may affect the afternoon schedule; get clarification on a maintenance task. With Tabula, all workplace messaging is in one platform, no searching through multiple apps or text messages.

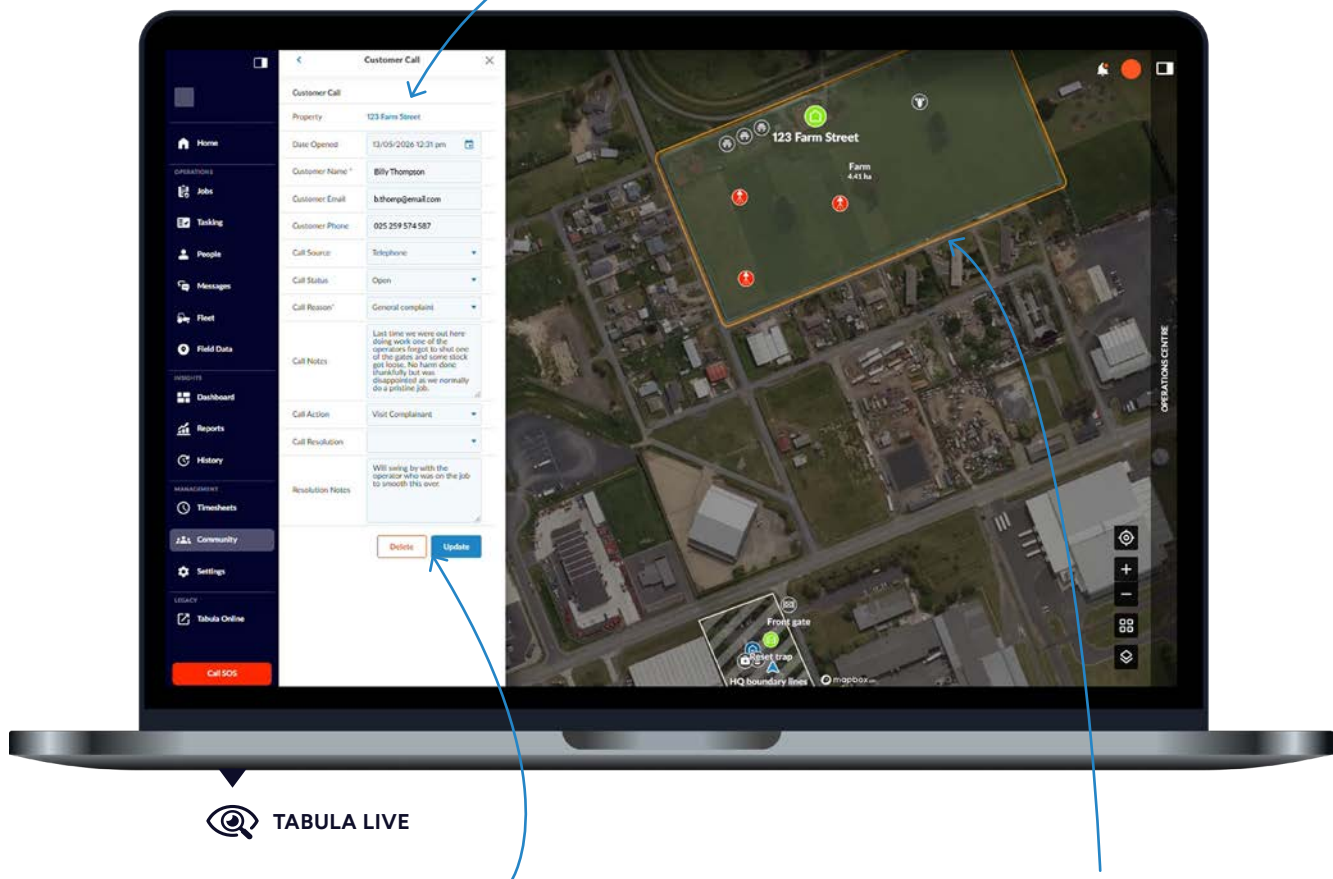

Keep neighbors informed.

Keep communication organized.

Manage community communication in one place

Notify neighbors before work begins and maintain a clear record of communication related to your operation. Track complaints, compliments and requests alongside orchard activity, helping support compliance requirements, simplify follow-up and maintain positive community relationships.

Track communication by property

Record complaints, compliments and requests

Notify neighbors before work begins

TABULA IN ACTION

Sometimes notifications on their own aren't enough. With Tabula, reduce complaints by visually identifying concerned households on the GVT as a reminder to spray operators to take extra care in that area.

Track time accurately. Cut the admin.

Log, review and approve
hours with ease

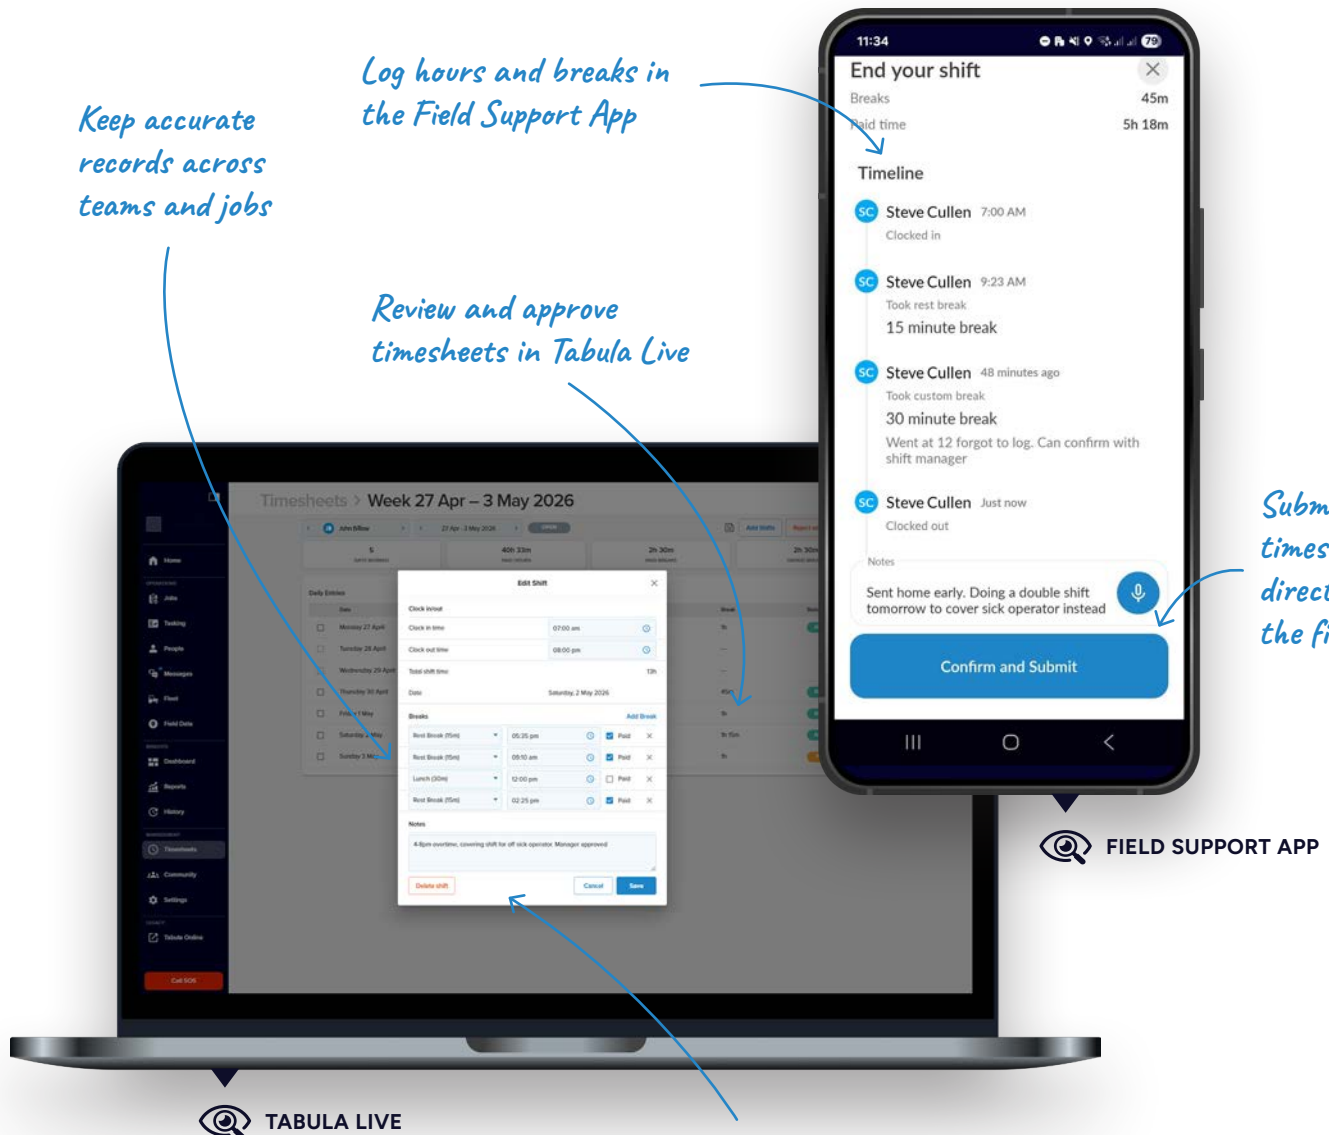

Keep timesheets accurate and easy to manage from field to office. Crews log hours and breaks in the Field Support App, while managers review, approve and export for payroll — reducing admin, improving accuracy and keeping everything moving.

Keep accurate
records across
teams and jobs

Log hours and breaks in
the Field Support App

Review and approve
timesheets in Tabula Live

Submit
timesheets
directly from
the field

TABULA IN ACTION

Export timesheets for
payroll in CSV format

Eight crews, twelve lone workers, a team in the workshop. With Tabula, everyone's hours and break times are captured and, if necessary, can be checked against their assigned tasks before approval.

See the risks. Work safely.

Define hazards and
no-go zones clearly

Make hazards, no-go zones and restrictions visible across every job. With Tabula, operators can clearly see where risks are — helping them avoid mistakes and complete work safely and correctly.

TABULA IN ACTION

Burst water pipe causing flooding, no-go area for hedge trimming and restricted entry after spraying. With Tabula, everyone can see and share new permanent or temporary hazards on their GVT and Field Support App.

Start every job right. Get the checks done.

Tailor and manage checks for people, vehicles and tasks

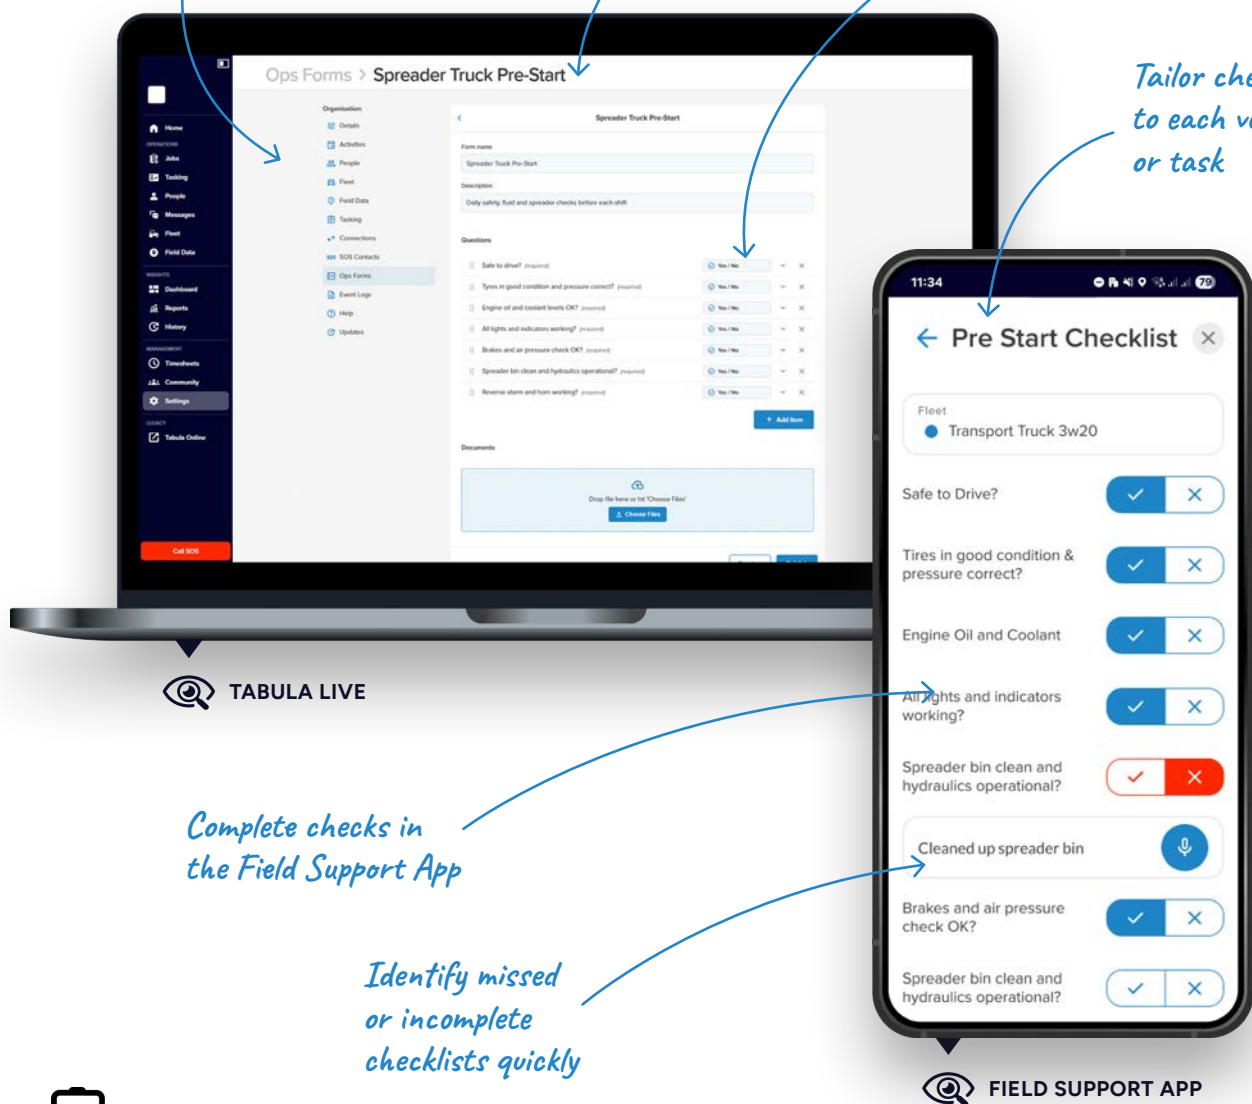

Make checks flexible and easy to manage across your operation. Tailor checklists to each vehicle or task, whether it's a pre-start, risk assessment or in-field check, and capture responses as work is done.

Turn notes into tasks and send to the right person

Store completed records for review and audit

Capture operator and asset checks in one place

Tailor checklists to each vehicle or task

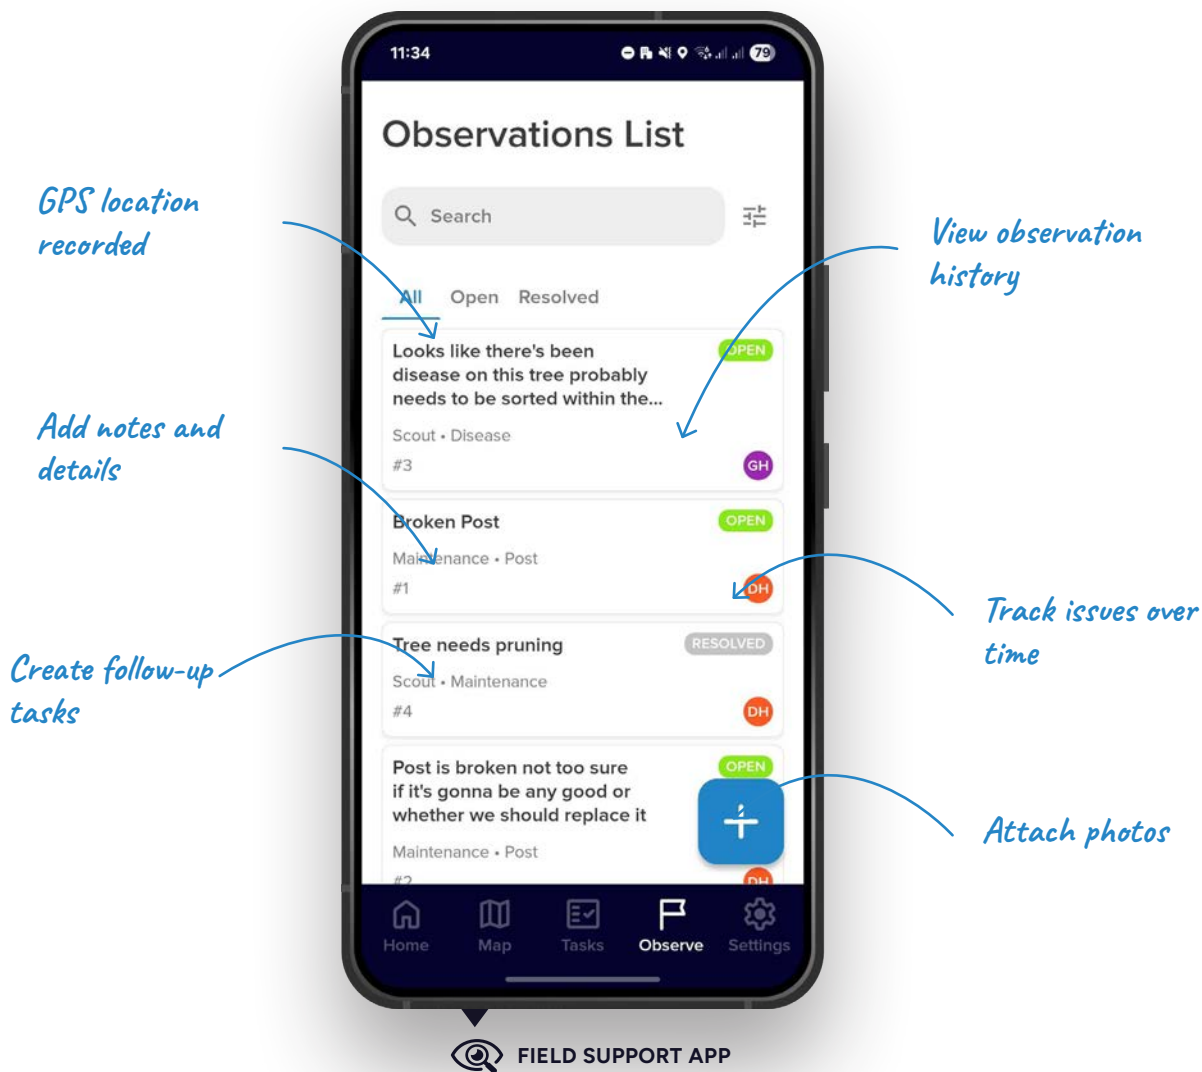

TABULA IN ACTION

Pre- start vehicle checks before heading out of the yard - one rat nest removed, tire pressure adjusted on three tractors, one oil leak discovered. With Tabula, minimize preventable fleet damage and recurring issues with digital checklists.

See something. Record it.

Capture observations
with location and photos

Record observations wherever work is happening, complete with GPS location, photos and notes. Capture issues as you see them, assign follow-up tasks and build a clear history of what's happening across your operation.

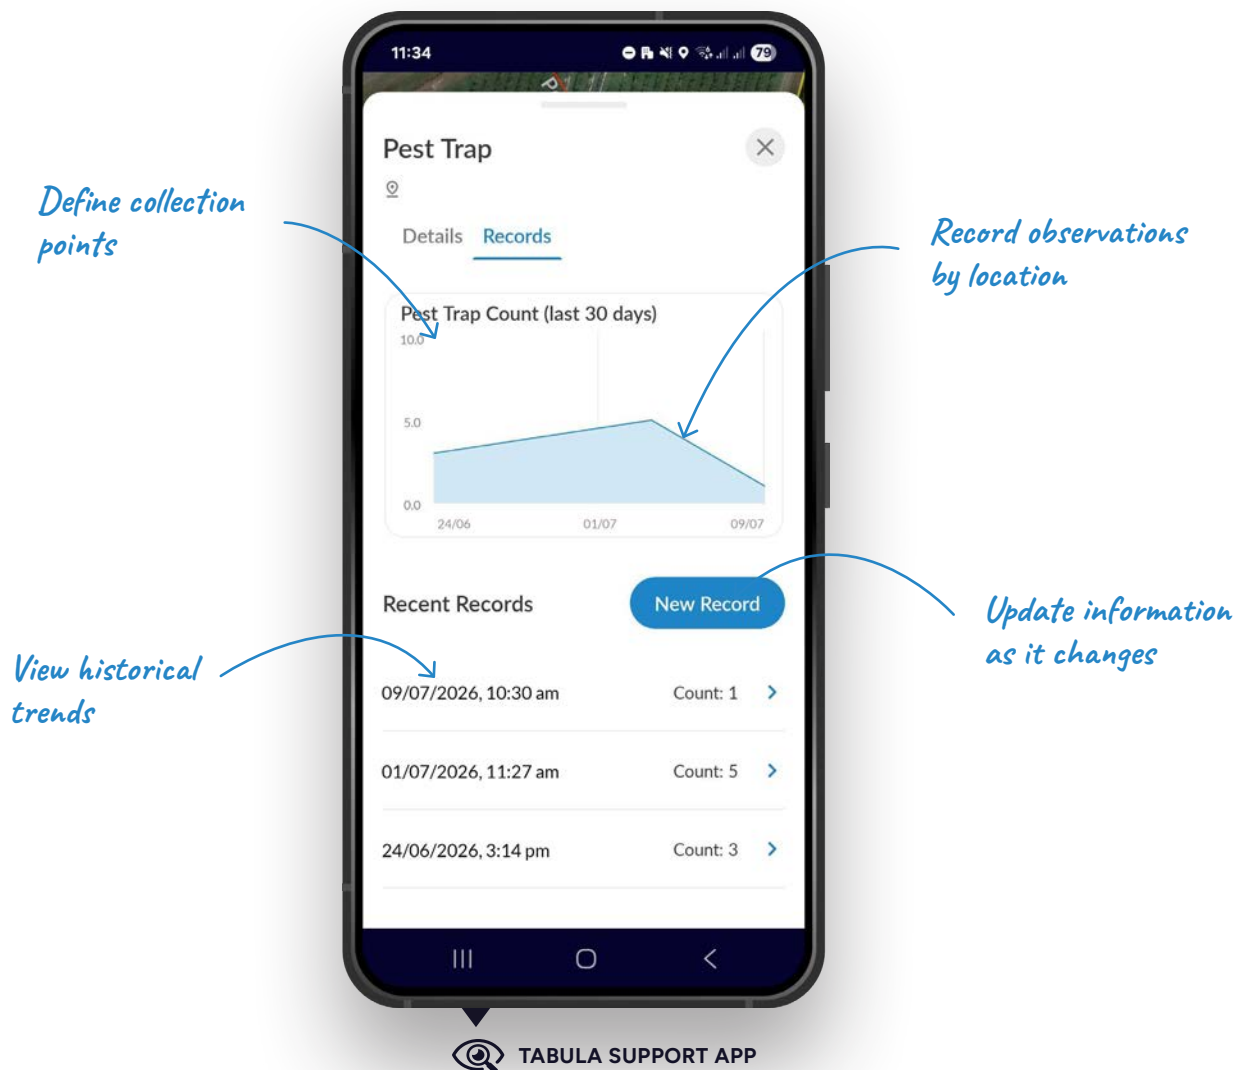

TABULA IN ACTION

An operator notices a damaged irrigation line while checking pest traps. They record the issue with a photo and GPS location before moving on. The maintenance team receives a follow-up task, knows exactly where to go and fixes the problem before it affects the crop.

Know what's where. As it changes.

Keep field information
accurate and up to date

Record field information where it happens, from pest trap counts and monitoring data to bin movements and inventory. Maintain a current view of every location without relying on paper records, manual logbooks or spreadsheets.

TABULA IN ACTION

Create a bin distribution plan based on estimated harvest and mark staging areas on orchard maps. Monitor the number of bins moved in and out of staging areas and headlands to make sure your harvesting crews never run out.

Create spray records.

Reduce double handling.

Generate export-ready information for your spray log

Use application information already captured in Tabula to generate export-ready spray log information. Reduce the need to re-enter data between systems, keep records up to date and make reporting easier as work is completed.

Export-ready spray log

TABULA ONLINE

TABULA IN ACTION

Hundreds of spray jobs, operators with different levels of experience, spray records critical for market entry. With Tabula, there's no need to constantly follow up with operators to get full details of their spray jobs - proof of application is collected automatically and additional details are captured digitally through in-job operator prompts.

Apply with confidence. Keep accurate records.

Bring spray control,
records and reporting
together.

Connect compatible spray systems to Tabula and bring application data, spray control and reporting into one connected workflow. More than machine control, Tabula connects spraying activity with job management, records and operational visibility across your wider horticulture operation.

*Automatic spray
control*

Live job visibility

*Accurate

TABULA IN ACTION

A critical spray job needs to be completed today, but your most experienced operator is unavailable. With Tabula, even a replacement operator has clear job instructions, spray settings and guidance from the start, while managers can follow progress in real time and capture accurate application records automatically.

"I wouldn't spray without Tabula. During frost-fighting, it's a lifesaver for planning and recording critical decisions around blossom spraying - right blocks, right time, and no risk of double-placement or misses."

JEREMY HISCOCK
Co-owner, Panmure Orchards

"Now, we have full clarity and traceability – we know exactly who carried out each application, what was applied, where it was done, and when it happened."
